The **Avenue project** is a world-first automated (driverless) minibuses system that picks you up at your home when you want and drops you off at your destination. The team paid particular attention to the most vulnerable people, such as the elderly and people with disabilities during the design of this new public transport system

*Ready to help you 24/24, 7/7
Solve your mobility problems
due to age or disabilities*

Get your freedom back!

***Fight against loneliness
Fight against isolation***

The problem of isolation caused by mobility difficulties affects numerous people and the automated public transit will allow those who were no longer able to move, to be once again active

***Disability?
No longer able to drive?
Automated public transport is
for you!***

***Do you have walking difficulties?
I'll pick you up right at the door of your house,
and drop you right to your destination!***

A ramp is provided!
Indicate the presence of a disability when reserving to ensure that everything is in place to welcome you in the best conditions

Your loved ones can make sure everything is going well for you, that you have entered the vehicle and exited when necessary

***Automated public transport:
A blessing for those who need it most !***
